MEMORANDUM OF UNDERSTANDING (MoU)

MEKARI SIGN API TESTING & INTEGRATION PROJECT WORKFLOW

1. PARTIES

This Memorandum of Understanding ("MoU") is entered into by and between:

- **First Party:** Mekari (PT. Mid Solusi Nusantara)
- **Second Party:** Unicode Creative (PT. Sobat Digital Kreatif)

2. PURPOSE & OBJECTIVES

The purpose of this MoU is to establish a cooperative framework between the First Party and the Second Party for testing, validating, and integrating the Mekari Sign API ecosystem into the Second Party's platform/application.

3. SCOPE OF API INTEGRATION & TESTING

The testing scope encompasses the following Mekari Sign API capabilities:

- **Authentication:** HMAC Signature authentication setup and client credential testing (`client_id` and `client_secret` generated via sandbox-developers.mekari.com).
- **Document Signing Workflows:** GlobalSign API integration, PSrE (Tilaka certified) digital signature integration, and Autosign API testing.
- **eMeterai Stamping:** Automated e-Meterai serial number generation and document stamping integration.
- **eKYC Verification:** Sandbox user registration, eKYC verification testing, and bypass handling for sandbox environments.

4. MOU PROJECT WORKFLOW PHASES

Phase	Description & Key Activities
Phase 1: Kick-off & Scope Definition	Conduct technical kick-off meeting; define project scope, deliverables, timeline; complete the Integration Requirement Document (IRD).
Phase 2: Sandbox Environment & Credentials Setup	Register sandbox account and request activation; generate HMAC API keys (`client_id` and `client_secret`); configure base URLs (`https://sandbox-api.mekari.com/v2/esign-hmac/v1`).
Phase 3: Integration & Testing Execution	Perform eKYC process testing and sandbox bypass; test API endpoints for sending document requests, callback URLs, and e-Meterai stamping; conduct Autosign consent letter and authorization letter testing.
Phase 4: User Acceptance Testing (UAT)	Conduct end-to-end UAT meeting; finalize sign-off verification across edge cases and potential failure modes.
Phase 5: Production Onboarding & Go-Live	Configure production environment credentials (`https://api.mekari.com/v2/esign-hmac/v1`); finalize production authorization letters; launch live usage tracking.

5. ROLES & RESPONSIBILITIES

First Party (Mekari (PT. Mid Solusi Nusantara)):

- Provide sandbox API access, credentials, and comprehensive technical documentation.
- Deliver technical assistance and guidance throughout the integration process.
- Provision quota top-ups required for sandbox eKYC and eMeterai testing.
- Conduct UAT review and assist in final verification prior to production launch.

Second Party (Testing Partner):

- Allocate qualified engineering and technical resources for implementation.
- Execute test cases strictly according to technical specifications and IRD guidelines.
- Implement robust callback handling logic, retry mechanisms, and error handling.
- Log, document, and report bugs or system issues encountered during testing.

6. CONFIDENTIALITY & DATA SECURITY

Both parties agree to protect all proprietary information, API credentials, technical specifications, and user data in strict compliance with applicable data protection laws and security standards (including ISO/IEC 27001 / ISMS standards, Kominfo, and Peruri regulations). Neither party shall disclose confidential information to any third party without prior written consent.

7. DURATION & TERMINATION

This MoU shall take effect on the date of execution by both parties and remain valid through the duration of the API testing and evaluation period, unless terminated earlier by mutual written agreement or upon completion of production onboarding.

8. SIGNATURE BLOCK

First Party:
Mekari (PT. Mid Solusi Nusantara)

Name: Muhamad Iqbal Nurmanditya
Title: Senior Project Manager

Second Party:
Unicode Creative (PT. Sobat Digital Kreatif)

Name: Muhammad Ilham Novarianto
Title: Senior Project Manager
